

## What if you could walk around your classroom while teaching from the whiteboard?

When a lesson is flowing and your students are excited, you want to be on the move. With a MimioPad™ wireless tablet, you can control your whiteboard from anywhere in your classroom. It comes with a wireless USB receiver that communicates automatically with the MimioTeach system. That means the simple MimioStudio toolbars and menus are the same for both products.

### Here's how the MimioPad tablet works:

- 1 ) Turn the tablet on and you can immediately control your whiteboard from anywhere in your classroom.
- 2 ) Walk anywhere you like, up to 9 meters ( 30 feet ) away.
- 3 ) Write, point, and click on the tablet with the MimioPad stylus.

### MimioPad technology helps you encourage student participation.

Because you 're free to move around, you can pay special attention to individual students and manage your classroom more effectively. Also multiple tablets can be connected to one computer. Students love to take turns using a MimioPad tablet and click on the whiteboard

*With my MimioPad, I can stroll around the room while connected - my students are engaged in their learning."*
